

## LISTING OF CLAIMS

The following listing of claims replaces all previous listings and versions of claims in this application.

### Listing of Claims:

Claims 1-59 (Canceled).

Claim 60 (Previously Presented) A method of creating end terminations on a two-part fastener attached to a web of material for producing a plurality of bags, comprising:

holding a first web of material relative to an outer surface of a first rotatable drum with  
a two-part interlocking fastener positioned at a known location; and  
fusing both parts of said two-part fastener together with a first laser beam while said  
two-part interlocking fastener remains interlocked; and

holding a second web of material against an outer surface of a second rotatable  
drum and fusing both parts of a two-part fastener of said second web of  
material together with a second laser beam, said first laser beam of said  
first drum and said second laser beam of said second drum being derived  
from a single laser.

Claim 61 (Previously Presented) The method of claim 60, wherein said holding includes  
suctioning at least one of said first and second webs of material against said outer surface of the  
first or second drum.

Claim 62 (Previously Presented) The method of claim 60, wherein said fusing includes projecting at least one of said laser beams from an interior of at least one of said rotatable drums.

Claim 63 (Previously Presented) The method of claim 62, wherein said projecting includes guiding said at least one laser beam through a slot in at least one of said rotatable drums.

Claim 64 (Previously Presented) The method of claim 60, wherein each of said fasteners includes an end termination component at spaced locations along said each fastener, said fusing includes fusing said material from each of said end termination components to both parts of said each fastener.

Claim 65 (Previously Presented) The method of claim 60, wherein said fusing includes a step of guiding at least one of said laser beams with a galvanometer-driven optic, or mirror.

Claim 66 (Canceled).

Claim 67 (Previously Presented) The method of claim 60, wherein said laser beams are from a CO<sub>2</sub> laser.

Claim 68 (Previously Presented) The method of claim 60, wherein said holding includes registering at least one of said two-part fasteners within a circumferential groove in said first or second drum.

Claim 69 (Previously Presented) The method of claim 60, further including cutting at least one of said fasteners at said end terminations.

Claims 70-133 (Canceled).

Claim 134 (Previously Presented) A method of creating end terminations on a two-part fastener attached to a web of material for producing a plurality of bags, comprising:

- holding a web of material relative to an outer surface of a first rotatable drum with a two-part fastener positioned at a known location;
- fusing both parts of said two-part fastener together with a first laser beam; and
- holding a second web of material against a second drum and fusing a two-part fastener of said second web of material with a second laser beam, said second laser beam for said second drum and said first laser beam of said first drum being derived from a single laser.

Claims 135 - 145 (Canceled).
